## magic compatibilities

Cyanoacrylate glue\*

SPIF Flow coil  
(e.g. pressure cooker)

\*MAGIC is glue compatible.

Magic is a micro-catheter intended for selective and hyperselective vascular catheterization for diagnostic and therapeutic purposes. The occlusion devices SPIF Flow Coil are intended for the embolization of vascular malformations of the vasculature. Magic and SPIF are class III CE0297 in compliance with Medical Device Directive (MDD 93/42/EEC amended by 2007/47/EC). Manufactured by BALT Extrusion SAS. Carefully read the instructions for use before use. First CE marking: 1998 (Magic) ; 2008 (SPIF). The content of this document, in particular data, information, trademarks and logos is BALT SAS's sole property. © 2018 BALT SAS and affiliates, all rights reserved. All representation and/or reproduction, whether in part or in full, is forbidden and would be considered a violation of BALT SAS and its affiliates' copyrights and other intellectual proprietary rights. This document with associated pictures is non-contractual and is solely dedicated to healthcare professionals and BALT's distributors (BALT's supplier's distributors). The products commercialized by BALT shall exclusively be used in accordance with the instructions for use included in the boxes. DC034GB (08/2018)

# magic

## Flow dependant microcatheter

Intended for selective and hyper selective vascular catheterization for diagnostic or therapeutic purposes.

# unique alloy

pursil and torver

avm\* treatment

### Flow dependent

MAGIC progression is facilitated by blood flow

Fast and gentle navigation of the microcatheter inside distal and tortuous vasculature

### Very distal access

The small size of the tip allows very distal intracerebral hyperselective catheterism of vessels down to less than 1mm in diameter

### Unique alloy

In 1982, BALT developed an alloy that combines the mechanical resistance of polyurethane (PUR) and the flexibility of silicone (SIL): **PURSIL**

In 1987, another alloy called **TORVER** was introduced for the proximal part of the catheter

vessels down to less than

# 1mm

in diameter

magic progression is facilitated by

# blood flow

\*Arteriovenous Malformation
